Studying at the Faculty of Pharmacy is designed for people interested in natural sciences, particularly biology and chemistry. Candidates should also be characterized by great accuracy and precision in performing the tasks assigned to them. Pharmacy study at the best medical academies, as they ensure great preparation for practice. The study is similar at all universities. The first two years include the training of basic subjects (chemistry, inorganic, organic and analytical, physical chemistry, botany, human anatomy and physiology, general biochemistry, computer science and mathematics more elements). Then the division on the field.

Qualifying examination at the Department of Pharmaceutical is a national exam, which was the deadline set for 2 July 2004. It will consist of 120 test questions, 60 of the biology and chemistry. The scope of the exam covers general school curriculum of biological-chemical profile. People with a degree in Business Pharmaceutical have many opportunities for professional development. Most are employed in pharmacies, both open and hospital. Currently on the market a growing number of pharmacies, which automatically reduces the chances of finding this kind of work. The alternative may be, for example, the representative of the medical or pharmaceutical industries. Such a person is responsible for the promotion and sale of its pharmaceutical companies in the region. The main tasks include meeting with doctors and urging them to establish co-operation. Medical representative must have a readily networking, be communicative and creating confidence. It should also be resistant to stress, as both earnings and maintain the profession depend on the results achieved sales. However, it is to fight what: business phone, a car and a fairly high salary is a real prospect for the best. Graduates may also find employment in the manufacture of medicines. Those with little experience have the opportunity to take a position on the middle and direct oversight of the manufacture of medicines. On a more experienced person waiting more creative tasks associated with creating, testing and implementation of new recipes.
